AutoCAD and the IES Standard AutoCAD has historically been associated with the IES standard. Since its inception, the most widely used IES Application Module or IES Application Module V3 (hereinafter referred to as the IES Module) has been used in AutoCAD. The IES Module is an interface for allowing users to access other CAD programs. Some notable CAD programs that use the IES standard include AutoCAD, ArchiCAD, and MicroStation. IES modules are compatible with multiple CAD programs. The original release of AutoCAD did not have the ability to create standard applications. It is also important to note that users had the ability to create their own custom applications using the API of AutoCAD. AutoCAD 1.0 was released with the first version of the IES Module. This software development tool allowed users to create their own custom interface, called the Application Programming Interface (API) System. AutoCAD Software and AutoCAD API System AutoCAD 2.0 and later versions were released with a completely redesigned IES Module that was not compatible with the original IES standard. In early versions of AutoCAD, users could not write their own interface, nor can they write their own interface for version 2.0 of AutoCAD. In later versions of AutoCAD, users could create custom applications, but they were called AutoCAD Custom Applications, as opposed to the original AutoCAD API. After upgrading to a newer version of AutoCAD, users may find that they cannot upgrade to older versions of AutoCAD, as the original interface was discontinued and removed from the current version. AutoCAD is a solid piece of software that was first created by engineering software developers, the developer of the interface is Autodesk. AutoCAD has been developed and built since 1982 and has been continuously developed and improved throughout the years. AutoCAD Basics and its Interface When it first was introduced, AutoCAD was seen as a more complex drafting application, offering features that only the engineering profession could afford. In the late 1980s, the introduction of AutoCAD 2.0 and later versions made this software more approachable and usable by CAD users that did not have a background in engineering. The development of the first release of AutoCAD was done by engineers that felt that CAD users should have a more affordable solution for drafting.
